

START

```
graph TD; Start([START]) --> Process[GO ← GO + 04H]; Process --> Start;
```

The flowchart consists of two main components. At the top is an oval-shaped start node labeled 'START'. A vertical arrow points downwards from this node to a rectangular process node. The process node contains the text 'GO ← GO + 04H'. From the bottom of the process node, a line extends downwards and then turns left, forming a loop that connects back to the vertical arrow between the start and process nodes.

$GO \leftarrow GO + [04H]$
